INTRODUCTION

The collaborative economy has experienced rapid growth and development in Europe in the past years. It offers new opportunities leading to more choice and lower prices for consumers and allows citizens and entrepreneurs to offer services either on an occasional basis or professionally, contributing to growth and jobs in Europe. The rapid development of the collaborative economy in Europe has also raised questions, inter alia as regards consumer and employee rights and the application of existing legislation.

In its Communication on “A European Agenda for Collaborative Economy”, issued in June 2016, the European Commission announced that it would continuously review developments in the European collaborative economy.¹ This second Eurobarometer survey on the collaborative economy is part of this review. It seeks to shed light on citizens’ perceptions, attitudes and practices in relation to collaborative platforms² and the services offered via those platforms, and follows a first Eurobarometer survey on collaborative platforms that was conducted in March 2016³.

The first chapter of this report provides an overview of the European Union citizens’ awareness and frequency of use of collaborative platforms, their assessment of the advantages and disadvantages of using such platforms, and the impact of these platforms on their behaviour with respect to the purchasing of services. The second chapter focuses on the use of collaborative platforms to provide services in EU countries, focusing on the frequency with which providers offer services via these channels, their reasons for doing so, and the reasons why some service providers do not use these channels. Finally, the third chapter examines the profiles of respondents as users, providers, or both users and providers of services via collaborative platforms.

This survey was carried out by TNS Political & Social network in the 28 Member States of the European Union between the 23rd and the 30th April 2018. Some 26,544 respondents from different social and demographic groups were interviewed via telephone (landline and mobile phone) in their mother tongue on behalf of the European Commission, Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs. The methodology used is that of Eurobarometer surveys as carried out by the Directorate-General for Communication (“Media monitoring, media analysis and Eurobarometer” Unit)⁴.

¹ COM(2016) 356 final. For more information: http://ec.europa.eu/growth/single-market/services/collaborative-economy_en. According to this Communication, collaborative economy involves three categories of actors: services providers, users of services and intermediaries that connect – via an online platform – providers and users and that facilitate transactions between them (‘collaborative platforms’).

² Collaborative platforms are specialist internet-based websites or apps that provide an open marketplace where consumers can connect with people offering services. Collaborative platforms are at the centre of the collaborative economy as they enable transactions between people providing and people using a service. They are used for a wide range of services ranging from renting accommodation and car sharing to small household jobs.

⁴ http://ec.europa.eu/public_opinion/index_en.htm

Note: In this report, countries are referred to by their official abbreviation. The abbreviations used in this report correspond to:

Belgium	BE	Latvia	LV
Czech Republic	CZ	Luxembourg	LU
Bulgaria	BG	Hungary	HU
Denmark	DK	Malta	MT
Germany	DE	The Netherlands	NL
Estonia	EE	Austria	AT
Greece	EL	Poland	PL
Spain	ES	Portugal	PT
France	FR	Romania	RO
Croatia	HR	Slovenia	SI
Ireland	IE	Slovakia	SK
Italy	IT	Finland	FI
Republic of Cyprus	CY*	Sweden	SE
Lithuania	LT	United Kingdom	UK

*Cyprus as a whole is one of the 28 European Union Member States. However, the 'acquis communautaire' has been suspended in the part of the country which is not controlled by the government of the Republic of Cyprus. For practical reasons, only the interviews carried out in the part of the country controlled by the government of the Republic of Cyprus are included in the 'CY' category and in the EU28 average.

*We wish to thank the people throughout the European Union
who have given their time to take part in this survey.*

Without their active participation, this study would not have been possible.

KEY FINDINGS

Nearly a quarter of Europeans have used services offered via collaborative platforms, mostly in the accommodation and transport sectors

- Just under a quarter (23%) of respondents have used services offered via collaborative platforms, but very few use such services on a regular basis i.e. at least once per month (4%).
- Apart from the potential impact that the different wording of the question used might have had on the results observed in 2016 in the previous Eurobarometer survey on this topic, the present survey indicates an increase in the proportion of those who used services offered via collaborative platforms (23% now compared to 17% in 2016).
 - However, there is a significant variation between Member States, ranging from 40% in Latvia to 17% in Portugal.
 - Younger respondents, those with the highest levels of education, those who live in large towns, and employees and the self-employed are the most likely to use services offered via collaborative platforms.
- Among those who have used collaborative platforms to access services, over half have accessed services in the accommodation (57%) and transport (51%) sectors, but few have accessed professional services (9%) or collaborative finance (8%).

A large majority of those who have used collaborative services would recommend them to others

- Among those who have used services offered via collaborative platforms, nearly nine in ten (88%) would recommend those services, and less than one in ten (7%) would not recommend them.

The most frequently mentioned advantage of collaborative platforms is a convenient access to services, while the main disadvantage is the lack of clarity about who is responsible in case of problems

- A majority of users mention *convenient access to services* (73%), *availability of user ratings and reviews* (60%), the fact that *services are cheaper or free* (59%), and the *wider choice of services* (56%) as advantages of using collaborative platforms compared to traditional channels. The *opportunity to interact with interesting people* (34%) and the *possibility to exchange services without paying for them* (31%) are less often mentioned advantages of services offered via collaborative platforms.
- Just under half (49%) see *lack of clarity about who is responsible in the event of a problem* as the biggest disadvantage. More than one third also mention *misleading ratings and reviews* from other users (38%), *misuse of personal data* (37%) and *less trust in the providers of services* (34%). The least mentioned disadvantages are the fact that *services offered are not as expected* (24%) and *problems with online booking process or payments* (22%).

- While only 2% of users *spontaneously* say there are no advantages of using collaborative platforms compared with traditional channels, 15% *spontaneously* say there are no disadvantages.
- On average, each user mentions around three advantages and two disadvantages of using collaborative platforms compared with traditional channels.

The most common reasons for not using collaborative platforms are not knowing what they are, or having preference for traditional channels

- Just over a third of those who do not use collaborative platforms do not use them because they do not know what they are (36%) or because they prefer services offered via traditional channels (34%). While there is considerable variation at the country level, one of these two reasons is the most frequently mentioned in all countries.
 - Women, older respondents, and those with lower levels of education are more likely to be unaware of these services, while those with higher levels of education are more likely to have concerns about trusting these services or sharing their personal data on these platforms.

Six in ten of the users of services offered via collaborative platforms use these services on top of their habitual usage of services offered via traditional channels or as newcomers to the market

- For six in ten (60%) of the users of services offered via collaborative platforms, the use of these services did not impact the extent to which they continued using services offered via traditional channels.
 - More specifically, one third (33%) of the users of collaborative platforms say they continue to use services offered via traditional channels to approximately the same extent, but they now additionally use these same services via collaborative platforms; at the same time, just over a quarter (27%) say that they only started using these services when they became available via collaborative platforms.
- On the other hand, around one third (32%) of the users of collaborative platforms, say that the use of services via collaborative platforms has replaced the use of services via traditional channels to at least some extent.
 - More specifically, a fifth of the users of collaborative platforms (20%) have to some extent replaced services they used via traditional channels with services offered via collaborative platforms, while just over one in ten (12%) have completely replaced some kinds of services and now use these services only via collaborative platforms.

Very few Europeans have offered services via collaborative platforms

- Only 6% of Europeans have offered services via collaborative platforms, with 3% having offered them once or a few times, 2% offering them occasionally, and only 1% offering them on a regular basis.

- Only one in ten providers (10%) say that the providing of services via collaborative platform represent their main source of income.
- Transport (44%) and accommodation (35%) are the sectors most frequently mentioned by those who have offered services via collaborative platforms.

While providers have a variety of reasons for offering services via collaborative platforms, nearly half spontaneously say they had not encountered any problems

- When asked to identify the reasons for offering services via collaborative platforms, just over half of providers say that these platforms offer an *easy way to interact with consumers* (53%) and a *more sustainable and efficient use of available assets* (51%), while half say that they *give access to more consumers* (50%) and represent an *additional source of income* (50%).
- Conversely, when asked to identify the main problems they had encountered when providing services via a collaborative platform, nearly half *spontaneously* say that they *had not encountered any problems* (46%).
 - The problem most frequently mentioned is the lack of clarity about how to provide the service legally (22%), followed by difficulties with customers using the services and complicated systems for paying tax (both 19%).

Almost one fifth of Europeans who have not yet provided services via collaborative platforms would consider doing so

- Just under a fifth (19%) of those who have not provided services via collaborative platforms would consider doing so.
- Among those who never offered services via collaborative platforms, almost two thirds (64%) say that they have never done so because they *have no time nor interest*.
 - *Lack of technical knowledge about how to use collaborative platforms* (31%), *lack of trust in the online booking process or payments* (25%), *lack of trust in consumers using the services* (24%) and *lack of clarity about how to provide the service legally* (22%) are also mentioned by more than one fifth of non-providers as a reason for having never offered services via collaborative platforms.
- More than one in ten (14%) of Europeans who have never offered services via collaborative platforms occasionally offer services via traditional channels, as private individuals.

I. USE OF SERVICES OFFERED VIA COLLABORATIVE PLATFORMS

In this section, we present the findings of a series of questions on European citizens' awareness of, and frequency of use of collaborative platforms.

1 Using services offered via collaborative platforms

Respondents were asked whether they had ever used a service offered via a collaborative platform, and if so, how frequently⁵. Those who gave a positive answer to this question were then asked in which sectors they had used these services⁶.

a. Frequency of use of services offered via collaborative platforms

Nearly a quarter of Europeans have used services offered via collaborative platforms

Just under a quarter (23%) of respondents say that they have used services offered via collaborative platforms. Around one in ten have used such services *once or a few times* (9%) or *occasionally* (i.e. once every few months) (10%), and 4% use such platforms *regularly* (i.e. once a month or more often).

D8 Have you ever used a service offered via a collaborative platform?
(% - EU)

Base: all respondents (n= 26,544)

⁵ D8. Have you ever used a service offered via a collaborative platform? ONE ANSWER ONLY No, never; Yes, once or a few times; Yes, occasionally (i.e. once every few months); Yes, regularly (i.e. once a month or more often); Don't know.

⁶ Q2. In which of the following sectors have you used a service offered via a collaborative platform? MULTIPLE ANSWERS POSSIBLE Transport (e.g. car sharing); Accommodation (e.g. renting an apartment); Food-related services (e.g. home delivery, food sharing); Household services (e.g. gardening, repairs, child care); Professional services (e.g. IT services, accounting); Collaborative finance (e.g. peer-to-peer lending or crowd-funding); Other; Don't know.

The results of the survey indicate that the proportion of those who say they have used a service offered via a collaborative platform has increased since the previous Eurobarometer survey in 2016⁷. Although the question and the answer options were worded differently⁸, the proportion of those who said they used services via these platforms was 17%, while the proportion of those who said either they had never heard of these platforms or they had heard of them but never visited them was 81%.

In all 28 Member States, only a minority of respondents have used services offered via a collaborative platform. However, there is significant variation between countries. More than a third of respondents have done so in Latvia (40%), Malta (35%) and Ireland (34%). At the other end of the scale, in nine countries, less than a fifth of the respondents have used services offered via collaborative platforms, with the lowest proportions of users observed in Bulgaria and Portugal (both 17%).

D8 Have you ever used a service offered via a collaborative platform?

Base: all respondents (n= 26,544)

⁷ FL438 on "The use of collaborative platforms":

<http://ec.europa.eu/commfrontoffice/publicopinion/index.cfm/Survey/getSurveyDetail/instruments/FLASH/surveyKy/2112>.

⁸ Q1 Which of the following matches your experience regarding this type of platform? You have never heard of these platforms; You have heard of these platforms but you have never visited them; You have been on one or more of these platforms and paid for a service once; You use the services of these platforms occasionally (once every few months); You use the services of these platforms regularly (at least every month); Other (DO NOT READ OUT); None (DO NOT READ OUT); DK/NA (DO NOT READ OUT).

D8 Have you ever used a service offered via a collaborative platform?
(% - TOTAL 'YES')

Base: all respondents (n= 26,544)

There are several significant **socio-demographic differences** in the proportions of those who have used services offered via collaborative platforms.

- Nearly four in ten respondents aged 15-24 (37%) or 25-39 (38%) have used a service offered via a collaborative platform at least once or a few times, compared with just over one in ten (11%) among those aged 55 or more.
- Nearly a third (32%) of those who have finished education at the age of 20 or more have done so, compared with only 5% among those who have finished education at the age of 15 or less.
- Just over a third (34%) of respondents living in large towns have used services offered via collaborative platforms, compared with less than a fifth (19%) of those living in rural areas.
- Over a third of employees (34%) and of the self-employed (37%) have done so, compared with less than a fifth of manual workers (15%) and of those not working (16%).

D8 Have you ever used a service offered via a collaborative platform?
(% - EU)

	No, never	Yes, once or a few times	Yes, occasionally (i.e. once every few months)	Yes, regularly (i.e. once a month or more often)	Total 'Yes'

Manual workers	85	6	6	3	15
Not working	84	7	7	2	16

b. Use of services offered via collaborative platforms by sector

Services in the accommodation and transport sectors are those that are most frequently used via collaborative platforms

Among respondents who have used services offered via collaborative platforms, over half have done so in the *accommodation* (57%) and *transport* (51%) sectors. A third of these respondents (33%) have used collaborative platforms to access *food-related services*, and just over one in ten (14%) have done so to access *household services*. Fewer respondents have used these platforms to access *professional services* (9%), *collaborative finance* (8%) or spontaneously mention *other sectors* (6%).

Q2 In which of the following sectors have you used a service offered via a collaborative platform?
(MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There are significant differences at **country level** on this question⁹.

In 15 of the 28 Member States, the largest proportion of those who have used services offered via collaborative platforms have done so in the *accommodation sector*, while in 12 countries, the largest proportion have accessed services in the *transport sector*. In Slovakia, the most frequently-used services offered via collaborative platforms are those related to *food* (50%) and in the United Kingdom the most frequently-used services are *accommodation* and *food-related services* (both 55%).

Q2 In which of the following sectors have you used a service offered via a collaborative platform?
(MULTIPLE ANSWERS POSSIBLE)
(% - THE MOST MENTIONED ANSWER BY COUNTRY)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

⁹ Results for Cyprus (n=93) and Luxembourg (n=110) should be treated with caution due to low sample sizes.

When recalculating these results on the total base of respondents, it can be observed that 14% of all respondents have used services in the accommodation sector, while 12% have done so in the transport sector.

Q2T In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: All respondents (n= 26,544)

Highest percentage per country		<i>Lowest percentage per country</i>							
		Highest percentage per item				Lowest percentage per item			

Base: All respondents (n= 26,544)

In 18 countries, at least half of those who have used services offered via collaborative platforms have done so in the **accommodation sector**¹⁰. Four cases stand out for particularly large proportions, with more than two thirds in Spain (69%), Finland (68%), Ireland (68%) and Greece (67%) using collaborative platforms to access services in this sector. At the other end of the scale, in Latvia (27%) and Lithuania (31%) less than a third of the users of collaborative platforms have used them to access services in the accommodation sector.

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - ACCOMMODATION (E.G. RENTING AN APARTMENT))

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

¹⁰ Here and throughout the country analysis of the results for this question (Q2), results for Cyprus (n=93) and Luxembourg (n=110) should be treated with caution due to low sample sizes.

In 14 of the 28 Member States, at least half of those who have used collaborative platforms have used them to access services in the **transport sector**, ranging from 50% in Italy and the United Kingdom to 76% in Estonia and 81% in Lithuania. Yet in four cases, less than a third of respondents have used collaborative platforms to access these services: Hungary (20%), Slovakia (25%), Finland (26%) and the Netherlands (27%).

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - **TRANSPORT (E.G. CAR SHARING)**)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In the United Kingdom (55%), Slovakia (50%), Ireland (49%) and the Netherlands (44%), more than four in ten of the users of collaborative platforms, have used these platforms to access **food-related services**, but in 17 of the 28 Member States, the proportion of these respondents that have used food-related services is less than the EU average of 33%, and in Denmark (14%) and Italy (16%) less than a fifth used collaborative platforms to access this type of services.

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - **FOOD-RELATED SERVICES (E.G. HOME DELIVERY, FOOD SHARING)**)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

Among the respondents who use collaborative platforms, just a minority in each country have used them to access services in the **household services sector**, with the highest proportions in Latvia (26%) and Malta (25%). In all but six cases, less than a fifth have accessed this type of services via collaborative platforms. In nine countries, less than one in ten give this answer, with particularly low proportions in Lithuania (4%) and Portugal (4%), where it is the sector least frequently mentioned by respondents.

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - **HOUSEHOLD SERVICES (E.G. GARDENING, REPAIRS, CHILD CARE)**)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In all countries, less than a fifth of the respondents who are users of collaborative platforms, have used these platforms to access **professional services**. Bulgaria (18%), Ireland and Luxembourg (both 16%) have the highest proportions of users of services of this sector, but in 10 countries less than one in ten of the users of collaborative platforms have used them for this purpose. In seven countries, the sector of professional services is the least frequently mentioned sector.

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - **PROFESSIONAL SERVICES (E.G. IT SERVICES, ACCOUNTING)**)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In France, Luxembourg, Malta (all 15%), Ireland (12%) and the United Kingdom (13%), over one in ten have used collaborative platforms to access services of the **collaborative finance sector**, but, in most Member States, the proportion of users who have used collaborative platforms to access these services is in single digits, with particularly low proportions in Denmark, Croatia, Hungary, Romania (all 2%) and Italy (1%). In 18 countries, the collaborative finance sector is the least mentioned sector.

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(% - **COLLABORATIVE FINANCE (E.G. PEER-TO-PEER LENDING OR CROWD-FUNDING)**)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There are several **socio-demographic differences** on this question, although they mostly apply to the three most popular service areas (transport, accommodation, and food-related services).

- Men are more likely than women to have used services offered via collaborative platforms in the *transport* sector (54%, compared with 47%), but less likely to have used such services in the *accommodation* sector (53%, compared with 60%).
- The age of the respondent seems to be inversely proportional to the likelihood to use services offered via collaborative platforms in the sectors of *transport* and *food*, with the youngest respondents the most likely to do so: for instance, over six in ten (63%) of those aged 15-24 have used services offered via collaborative platforms in the transport sector, compared with 55% among those aged 25-39, 43% among those aged 40-54 and just less than four in ten (39%) of those aged 55 years or more. However, middle-aged respondents are more likely to use services offered via collaborative platforms in the *accommodation* sector: over six in ten of those aged 25-39 or 40-54 use these services (62% and 61%, respectively), compared with just over half (51%) of those aged 55 or more, and less than half (45%) of those aged 15-24.
- Those who live in large towns are more likely than those who live in rural villages to use services offered via collaborative platforms in the *transport* (57%, compared with 42%), *food-related* (38% vs. 28%) and *household services* (17% vs. 11%) sectors.
- The self-employed and employees (both 62%) are significantly more likely to use *accommodation* services offered via collaborative platforms than manual workers (45%) or those not in employment (47%).

Q2 In which of the following sectors have you used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)

(% of users of services offered via collaborative platforms - EU)

	Accommodation (e.g. renting an apartment)	Transport (e.g. car sharing)	Food-related services (e.g. home delivery, food sharing)	Household services (e.g. gardening, repairs, child care)	Professional services (e.g. IT services, accounting)	Collaborative finance (e.g. peer-to-peer lending or crowd-funding)

Not working	47	51	38	15	7	7

2 Overall feedback on services offered via collaborative platforms

Respondents who said they had used services offered via collaborative platforms were asked whether they would recommend these services or not¹¹.

Almost nine in ten of those who have used services offered via collaborative platforms would recommend them to others

Among those who have used services offered via collaborative platforms, nearly nine in ten (88%) would recommend those services. Just over a third (35%) say *they would definitely recommend these services*, while just over half (53%) *would recommend them to some extent*. Less than one in ten (7%) *would not recommend them*, with only 2% of respondents saying they *would definitely not do so*. A small minority (4%) of users spontaneously say they would recommend some types of services, but not all, while 1% say they don't know.

Q6 Overall, would you recommend services offered via collaborative platforms or not? (% - EU)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

¹¹ Q6. Overall, would you recommend services offered via collaborative platforms or not? ONE ANSWER ONLY Yes, definitely; Yes, to some extent; No, not really; No, definitely not; You would recommend some types of services, but not all; Don't know.

There is not much country variation in the overall proportions of those who would recommend services offered via collaborative platforms, as at least eight in ten collaborative platform users in all countries say they would do so¹². The only exception is the Netherlands, where less than three quarters (73%) say they would recommend these services.

However, there are significant differences when it comes to proportions of **users who would definitely recommend these services**. Malta stands out in this respect: nearly two thirds (64%) of those who have used these services would definitely recommend them, and in further seven countries at least half would also do so. In the remaining countries, more than one fifth of the users of these services would definitely recommend them, ranging from 44% of users in Portugal to 24% in Germany and Latvia.

Large variations across countries can also be observed in the proportions of **users who would recommend these services to some extent**, ranging from six in ten or more in Latvia (66%) and Poland (60%) to less than one third in Malta (29%) and Croatia (31%).

In most countries, the proportion of respondents **who would not recommend these services** is less than one in ten. The exceptions are Belgium, the Netherlands (both 15%) and Luxembourg (10%).

There is a similar pattern in the case of those who spontaneously say they **would recommend some of these services, but not all of them**: over one in ten respondents give this answer in the Netherlands (11%) and Sweden (11%), but elsewhere the proportion is in single digits.

Q6 Overall, would you recommend services offered via collaborative platforms or not? (%)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

¹² Here and throughout the country analysis of the results for this question (Q6), results for Cyprus (n=93) and Luxembourg (n=110) should be treated with caution due to low sample sizes.

Q6 Overall, would you recommend services offered via collaborative platforms or not?
(% - TOTAL 'YES')

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There are few **socio-demographic differences** on this question.

- Respondents aged 15-24 (38%), who finished their education at or after the age of 20 (36%) and who live in large towns (38%) are the most likely to say that they would *definitely* recommend these services.
- There are few differences in terms of sectors in which collaborative platforms were used. Those who have used professional services offered via collaborative platforms are slightly less likely to *definitely* recommend them compared to users of collaborative finance services (36% vs. 41%). Those who have used collaborative finance, transport or accommodation services offered via collaborative platforms are the most likely to say they would recommend these services to at least some extent, although the gap with users of services in other sectors is small (92%-91% vs. 86%-89%).

Q6 Overall, would you recommend services offered via collaborative platforms or not?

3 Advantages and disadvantages of using collaborative platforms as a user

Respondents who said that they had used services provided by collaborative platforms were asked to identify the advantages¹³ and disadvantages¹⁴ of such platforms compared with traditional channels.

a. Advantages of collaborative platforms compared with traditional channels

Almost three quarters of the users of services offered via collaborative platforms mention as an advantage of these platforms the fact that they offer a more convenient access to services compared with traditional channels

There are significant differences in the proportions of users who identify various advantages of collaborative platforms. Nearly three quarters (73%) of those who have used services offered via a collaborative platform say that a *more convenient access to services* is an advantage of such platforms compared with traditional channels. Smaller majorities of respondents mention as advantages the *availability of ratings and reviews by users* (60%), the fact that *services are cheaper or free* (59%), or that there is a *wider choice of services which are unavailable via traditional channels* (56%). Significantly fewer respondents say the fact that they offer *opportunities to interact with interesting people* (34%) or to *exchange services rather than pay for them* (31%) are an advantage of collaborative platforms. Only 2% say that there are no advantages of collaborative platforms over traditional channels.

Small proportions spontaneously mention other advantages or say they don't know (both 1%).

¹³ Q4. In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? MULTIPLE ANSWERS POSSIBLE Cheaper or free services offered via collaborative platforms; A wider choice of services unavailable via traditional channels; A more convenient access to services; The availability of ratings and reviews by users; The opportunities they offer to interact with interesting people; Possibility of exchanging services instead of paying for them; Other; None, there are no advantages; Don't know.

¹⁴ Q5. In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? MULTIPLE ANSWERS POSSIBLE Problems with the online booking process or payments; Less trust in the providers of services offered via collaborative platforms; Services offered via collaborative platforms are not as expected; Misleading ratings and reviews from users; Lack of clarity about who is responsible in the event of a problem; Misuse of your personal data; Other; None, there are no significant issues; Don't know.

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

Although the question and the answers were worded differently¹⁵ and the question gave the possibility to choose only two answers, these results are broadly similar to those observed during the Eurobarometer survey carried out in 2016¹⁶. In that instance, 'The access to services is organized in a more convenient way' (41%) and 'It is cheaper or free' (33%) were the most frequently mentioned benefits of collaborative platforms according to the users, while the 'availability of ratings and reviews' was not included in the list of possible options.

¹⁵ Q3 Compared to the traditional commerce of goods and services, what do you think are the main benefits of this type of platform for its users? (MAXIMUM TWO ANSWERS) It is cheaper or free; It offers new or different services; The access to services is organized in a more convenient way; The ability to exchange products or services instead of paying with money; Other (DO NOT READ OUT); None (DO NOT READ OUT); DK/NA (DO NOT READ OUT).

¹⁶ FL438 on "The use of collaborative platforms":

<http://ec.europa.eu/commfrontoffice/publicopinion/index.cfm/Survey/getSurveyDetail/instruments/FLASH/surveyKy/2112>.

In 25 of the 28 Member States, at least six in ten of those who have used services offered via collaborative platforms¹⁷ say that **convenient access to services** is an advantage of such platforms compared with traditional channels, ranging from 60% of the users in Cyprus to over eight in ten of those in Slovenia (87%), the United Kingdom (84%), Ireland (83%) and Spain (81%). The exceptions are the users of collaborative platforms in Croatia, where just half of them give this answer (50%) and in Italy and Denmark where only a minority do so (44% and 40%, respectively). In all but four countries, this is the most frequently mentioned advantage, and, in a further three countries, it is the second most frequently mentioned one.

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - **A MORE CONVENIENT ACCESS TO SERVICES**)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

¹⁷ Here and throughout the country analysis of the results for this question (Q4), results for Cyprus (n=93) and Luxembourg (n=110) should be treated with caution due to low sample sizes.

There are significant country-level differences in the proportions of users of collaborative platforms who see the **availability of ratings and reviews by users** as an advantage. In 17 countries, at least half say this is an advantage, but this varies from just half in Luxembourg, Romania and Slovakia (all 50%) to three quarters in Spain (75%), and nearly as many in Slovenia (74%) Austria and the Czech Republic (both 73%). In most of the countries where a minority of the users of collaborative platforms identify the availability of ratings and reviews as an advantage, at least a quarter of users give this answer. The exception is Malta, where only 13% see this as an advantage of collaborative platforms. In 10 countries, this is the second most frequently mentioned advantage of collaborative platforms (in Spain, jointly with 'Cheaper or free services offered via collaborative platforms'), and in a further 10 it is the third most frequently mentioned (in Lithuania, jointly with 'A wider choice of services unavailable via traditional channels').

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - THE AVAILABILITY OF RATINGS AND REVIEWS BY USERS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

A majority of users in 19 countries say that the fact that **services offered via collaborative platforms are cheaper or free** is an advantage of collaborative platforms. This is particularly the case in the Czech Republic, where nearly nine in ten (87%) give this answer, followed by over three quarters in Slovenia (77%). However, in Finland (51%) and Estonia (52%) only just over half of the users of collaborative platforms hold this view. In nine countries, only a minority share the same view, but in almost all of these nine countries at least four in ten users of these platforms mention as an advantage the fact that services offered via these platforms are cheaper or free. The exceptions are Hungary (35%) and Malta (32%). In four countries, this is the most frequently mentioned advantage of collaborative platforms, and in a further 13 is the second most frequently mentioned.

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - CHEAPER OR FREE SERVICES OFFERED VIA COLLABORATIVE PLATFORMS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In 16 countries, at least half of the users of collaborative platforms think that the **wider choice of services** is an advantage of collaborative platforms compared with traditional channels. This ranges from just half of users in the Netherlands (50%) to over two thirds in Slovenia (72%), Spain (69%) and Austria (68%). Among the 12 countries where only a minority of users of collaborative platforms mention this as an advantage, the proportions range from just over a fifth (21%) in Hungary to nearly half in Belgium, Croatia and Romania (all 49%). In four countries, this is the second most frequently mentioned advantage (in Malta, jointly with 'Cheaper or free services'). In 15 countries, this is the third most frequently mentioned advantage (in Bulgaria and in Slovakia, jointly with 'Cheaper or free services').

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - A WIDER CHOICE OF SERVICES UNAVAILABLE VIA TRADITIONAL CHANNELS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In France (54%), Austria (53%) and Slovenia (50%), at least half of the users of collaborative platforms consider as an advantage of these platforms the fact that they offer **the opportunity to interact with interesting people**. Elsewhere, only a minority mention this advantage, but there is still a wide range of responses. In Poland (44%), the Czech Republic (42%) and Latvia (41%), over four in ten do so, compared with just over one in ten in Estonia (12%) and Sweden (11%), and less than one in ten in Malta (8%).

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - THE OPPORTUNITIES THEY OFFER TO INTERACT WITH INTERESTING PEOPLE)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In all 28 Member States, only a minority of the users of collaborative platforms think that an advantage of these platforms is the **possibility they offer to exchange services instead of paying for them**. Nevertheless, there is much variation between countries. In France, Portugal (both 46%) and Spain (45%) nearly half of the users consider this an advantage, and in a further 13 countries more than a quarter do. Yet in the remaining 12 countries, no more than a fifth agree that this is an advantage. As in several of the previous cases, the lowest proportion of users who give this answer is found in Malta (4%).

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - POSSIBILITY OF EXCHANGING SERVICES INSTEAD OF PAYING FOR THEM)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

The table below illustrates the results highlighting the first, second and third most frequently mentioned answers by country.

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any?
(MULTIPLE ANSWERS POSSIBLE)
(%)

		A more convenient access to services	The availability of ratings and reviews by users	Cheaper or free services offered via collaborative platforms	A wider choice of services unavailable via traditional channels	The opportunities they offer to interact with interesting people	Possibility of exchanging services instead of paying for them	Other (SPONTANEOUS)	None, there are no advantages (SPONTANEOUS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

Across the EU, respondents who have used services offered via collaborative platforms mention *an average of around three advantages* (3.1) of using these platforms compared with traditional channels. In 15 countries, collaborative platform users mention an average of at least three advantages, with the highest figures observed in Slovenia (4.0) and Spain (3.8). The only countries in which users mention an average of less than two advantages are Malta (1.6) and Italy (1.9).

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any?
(MULTIPLE ANSWERS POSSIBLE)

		Average number of advantages mentioned
EU28		3.1
SI		4.0
ES		3.8

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There are several significant **socio-demographic differences** on this question, as follows:

- Younger users of collaborative platforms are the most likely to mention each of the advantages of collaborative platforms over traditional channels that were proposed, but the extent of this difference varies. For example, nearly two thirds (64%) of the users aged 15-24 consider an advantage of these platforms the fact that they *offer cheaper or free services*, compared with less than half (48%) among those aged 55 years or more. Yet only five percentage points separate the youngest (59%) and the oldest (54%) age cohorts on the question of whether *a wider choice of services* represents an advantage of collaborative platforms.
- In four cases, there is a clear difference between educational groups. Those with the highest level of education are more likely to consider each of the following as advantages of collaborative platforms: *cheaper or free services* (61% of those who finished education aged 20 or more vs. 43%-55% of those who finished education aged less than 20 years); *a wider choice of services* (57% vs. 46%-52%); and *more convenient access to services* (74% vs. 67%-69%). Similarly, those who have finished education aged 16 or more are more likely to consider the *availability of ratings and reviews by users* as an advantage compared to those who have finished education aged 15 or less (61%-58% vs. 46%).
- The self-employed are more likely than manual workers to think that *cheaper or free services* (63% vs. 57%), *a wider choice of services* (60% vs. 48%), and *more convenient access to services* (77% vs. 67%) are advantages of collaborative platforms. However, manual workers are slightly more likely than the self-employed to see the *opportunities these platforms offer to interact with interesting people* as an advantage (42% vs. 36%).
- Users of collaborative platforms in the collaborative finance sector are the most likely to mention each of the proposed advantages. For instance, they are the most likely to mention *the possibility of exchanging services instead of paying for them* (54% vs. 29%-35% of users of services in other sectors) or *cheaper or free services* (76% vs. 53%-68%) as advantages of collaborative platforms.

Q4 In your personal experience, what are the advantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)

(% of users of services offered via collaborative platforms - EU)

b. Disadvantages of collaborative platforms compared with traditional channels

Lack of clarity about who is responsible in the event of a problem is the disadvantage of collaborative platforms most frequently mentioned by users

The majority of those who have used collaborative platforms identify at least one disadvantage, with only 15% spontaneously saying that there are no significant issues.

The most frequently mentioned disadvantage is the *lack of clarity about who is responsible in the event of a problem* (49%), followed by *misleading ratings and reviews* (38%), *misuse of personal data* (37%), and *less trust in the providers of services offered via collaborative platforms* (34%). More than one fifth of the users mention as a disadvantage the two following issues: *services offered via collaborative platforms are not as expected* (24%), or that *there are problems with the online booking process or payments* (22%).

3% spontaneously mention *other disadvantages*, while 1% *don't know*.

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

When comparing with the results of Eurobarometer survey carried out in 2016, again it should be noted that the question and the possible answers were differently worded¹⁸ and respondents could only choose two possible answers. However, 'Not knowing who is responsible in case a problem arises' (41%) was, already at that time, the disadvantage of collaborative platforms most frequently mentioned by users.

There is a clear split between countries in the proportion of respondents who consider a disadvantage of collaborative platforms the **lack of clarity about who is responsible in the event of a problem**, although this is the most frequently mentioned disadvantage in all but two countries¹⁹ (in Finland, jointly with 'Less trust in the providers of services offered via collaborative platforms'). In 13 of the 28 Member States, a majority of the users of collaborative platforms mention this as a disadvantage, ranging from just over half in Poland and the United Kingdom (both 52%) to around two thirds in Spain (66%) and Germany (65%). In the remaining 15 countries, just a minority of the users of collaborative platforms share this view: in France (49%), Greece (48%) and Sweden (44%), over four in ten do so, but this proportion falls to around a quarter in Finland (25%) and Hungary (24%), and to less than a fifth (19%) in Italy.

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - LACK OF CLARITY ABOUT WHO IS RESPONSIBLE IN THE EVENT OF A PROBLEM)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

¹⁸ Q4 Compared to the traditional commerce of goods and services, what do you think are the main problems for the people using the services offered on these platforms? (MAXIMUM TWO ANSWERS) Not knowing who is responsible in case a problem arises; Being disappointed because the services and goods do not meet expectations; Not having enough information on the service provided; Not trusting the provider or seller; Not trusting the internet transactions in general; Other (DO NOT READ OUT); None (DO NOT READ OUT); DK/NA (DO NOT READ OUT).

¹⁹ Here and throughout the country analysis of the results for this question (Q5), results for Cyprus (n=93) and Luxembourg (n=110) should be treated with caution due to low sample sizes.

In only one country, Latvia (51%), more than half of the users of collaborative platforms mention **misleading ratings and reviews** as a disadvantage of these platforms. Nevertheless, there are significant differences among the remaining countries. In Germany (49%), Bulgaria and Ireland (both 48%), nearly half of the users of collaborative platforms share this view. At the other end of the scale, in 9 countries, less than a quarter of them think that misleading ratings and reviews is a disadvantage, with the lowest proportions in Denmark, Finland (both 14%), Estonia and Malta (both 13%). In 16 countries, this is the second most frequently mentioned disadvantage (in Luxembourg, Slovakia and Spain, jointly with 'Misuse of your personal data', while in Austria, jointly with 'Less trust in the providers of services').

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - MISLEADING RATINGS AND REVIEWS FROM USERS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In all countries, only a minority of users think that the **misuse of personal data** is a disadvantage of collaborative platforms, but there is significant variation between countries. In Ireland (47%), Poland (45%), France and Spain (both 44%), over four in ten users of collaborative platforms think so, and, in a further 11 countries, more than a third of the users share the same view. In five countries, less than a fifth see misuse of personal data as a disadvantage, with a particularly low proportion holding this view in Denmark (7%). Misuse of personal data is the most frequently mentioned disadvantage only in Italy (24%). In 10 countries this is the second most frequently mentioned disadvantage (in Estonia, jointly with 'Less trust in the providers of services'), while in 11 it is the third most frequently mentioned disadvantage.

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - MISUSE OF YOUR PERSONAL DATA)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There is a similar distribution of country-level responses when it comes **to lower trust in the providers of services**. In the Czech Republic, Germany (both 44%), Ireland and Latvia (both 41%), over four in ten users of collaborative platforms see this as a disadvantage, while in a further nine countries more than a third share this view. By contrast, in Hungary (14%), Estonia and Malta (both 13%), well under a fifth of respondents think that lower trust in service providers is a disadvantage of collaborative platforms. This is the most frequently mentioned disadvantage only in Finland (25%, jointly with 'Lack of clarity about who is responsible'), the second most frequently mentioned in four countries, and the third most frequently mentioned in 8 countries.

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - LESS TRUST IN THE PROVIDERS OF SERVICES OFFERED VIA COLLABORATIVE PLATFORMS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In Latvia, nearly half (48%) of the users of collaborative platforms consider a disadvantage of these platforms **the fact that services offered are not as expected**. With the exception of Ireland (35%), in all other countries no more than a third (33%) of the users give this answer, and in 13 countries fewer than a fifth do so, with the lowest proportion in Hungary (9%). This is the third most frequently mentioned disadvantage in 5 countries.

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - SERVICES OFFERED VIA COLLABORATIVE PLATFORMS ARE NOT AS EXPECTED)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

Nearly a third of the users of collaborative platforms in the United Kingdom (32%) see as a disadvantage of these platforms the **problems with online booking processes or payments**, followed by three in ten of the users in Ireland (30%). In the majority of the remaining countries, more than one in ten users share the same view, ranging from 27% in Romania to 12% in Malta. However, in four cases less than one in ten see booking or payment problems as a disadvantage of collaborative platforms: these are Croatia (8%), Hungary (8%), Denmark (7%) and Finland (7%). Problems with the online booking process or payments is the second most frequently mentioned disadvantage in Estonia (15%).

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - PROBLEMS WITH THE ONLINE BOOKING PROCESS OR PAYMENTS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In all cases, just a minority of the users of collaborative platforms *spontaneously* say that there are **no disadvantages** of collaborative platforms. However, several countries stand out for the high proportion of respondents who spontaneously give this response. In Finland (42%), Hungary (41%) and Estonia (40%), at least four in ten think there are no disadvantages, as do over a third in Denmark (35%) and just under three in ten in Croatia (29%). In all other cases less than a quarter think that there are no disadvantages, with the lowest proportion in Bulgaria (6%).

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any? (MULTIPLE ANSWERS POSSIBLE)
(% - NONE, THERE ARE NO SIGNIFICANT ISSUES (SPONTANEOUS))

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

The table below illustrates the results highlighting the first, second and third most frequently mentioned answers by country.

Q5 In your personal experience, what are the disadvantages of using collaborative platforms compared with traditional channels, if any?
(MULTIPLE ANSWERS POSSIBLE)
(%)

		Lack of clarity about who is responsible in the event of a problem	Misleading ratings and reviews from users	Misuse of your personal data	Less trust in the providers of services offered via collaborative platforms	Services offered via collaborative platforms are not as expected	Problems with the online booking process or payments	Other (SPONTANEOUS)	None, there are no significant issues (SPONTANEOUS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

Across the EU, respondents who have used services offered via collaborative platforms mention *an average of around two disadvantages* (2.1) of using these platforms compared with traditional channels. In 15 countries, collaborative platform users mention an average of at least two disadvantages, with the highest figures observed in Ireland, Latvia (both 2.6), Germany and Spain (both 2.5). In two countries, users mention an average of one or less than one disadvantage: these are Hungary (0.9) and Estonia (1.0).

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There are some **socio-demographic differences**, as follows:

- Users aged 15-24 are more likely than those aged 55 years or more to mention as a disadvantage any of the following items: *lack of clarity about who is responsible in the event of a problem* (53% vs. 45%), *problems with the online booking process or payments* (29% vs. 21%), *less trust in the providers of services* (37%, compared with 31%) and that *services offered via collaborative platforms are not as expected* (25% vs. 20%). The older cohort is more likely to mention *misuse of personal data* (37% vs. 30%), and they are also more likely to see no disadvantages (19% vs. 11%). Finally, users aged 25-39 are the most likely to mention *misleading ratings and reviews* as a disadvantage of collaborative platforms (41% vs. 35%-37% of other age groups).
- There are few strong differences between educational groups. Those with the lowest level of education are the least likely to mention as a disadvantage the two following statements: *lack of clarity about who is responsible in case of a problem* (35% vs 47%-49%) and *misleading ratings and reviews* (29% vs. 38%-41%). Conversely, those with the highest levels of education are slightly more likely to see *no disadvantages* (22% vs. 16%) compared with the least educated.
- The self-employed are more likely than manual workers to mention all of the disadvantages, and particularly *lack of clarity about who is responsible in case of problems* (53% vs. 32%), *services not being as expected* (28% vs. 13%), *less trust in service providers* (35% vs 26%), *misleading ratings and reviews by other users* (45% vs. 31%). On the other hand, manual workers are more likely than the self-employed to say that there are *no disadvantages* to collaborative platforms (32% vs. 11%).
- No clear pattern can be identified when it comes to the analysis by sector of the services used via collaborative platforms. However, users of services in the professional services sector are the most likely to mention as disadvantages *misleading ratings and reviews* (48% vs. 37%-39% among users in other sectors) and, together with users of household services, the fact that the *services are not as expected* (32%-31% vs. 23%-26%). Users of services in the collaborative finance sector are the most likely to mention misuse of personal data (51% vs. 38%-41%).

4 Reasons for not using services offered via collaborative platforms

Those respondents who said they had not used services offered via collaborative platforms were asked to identify reasons why they had not done so²⁰.

The most common reasons for not using collaborative platforms are not knowing what they are, or preference for traditional channels

The most frequently mentioned reasons for not using collaborative platforms are *not knowing what such platforms are* (36%) and *preference for services offered via traditional channels* (34%). A further fifth of respondents mention *concerns about sharing personal data on the platform or the Internet* (20%), followed by *lack of trust in the services offered by collaborative platforms* (17%) and *lack of technical knowledge about how to use collaborative platforms* (14%). Less than one in ten mention *poor internet access* (6%) as a reason for not using these services, while just over one in ten spontaneously mention *other reasons* (13%) and 3% say they don't know.

Q1 For which of the following reasons have you never used a service offered via a collaborative platform?
(MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have never used services offered via collaborative platforms (n= 20,034)

²⁰ Q1. For which of the following reasons have you never used a service offered via a collaborative platform? MULTIPLE ANSWERS POSSIBLE You don't know what collaborative platforms are; Poor Internet access; Lack of technical knowledge about how to use collaborative platforms; Lack of trust in the services offered via collaborative platforms; Preference for services offered via traditional channels (e.g. with direct personal contact); Concerns about sharing personal data on the platform or the Internet; Other; Don't know.

At **country level**, there is significant variation in the proportions who mention each of the various reasons for not using services via a collaborative platform.

In 19 of the 28 Member States, the reason most frequently given for not using collaborative platforms is that respondents **do not know what such platforms are** (in Estonia and Sweden, jointly with 'Preference for services offered via traditional channels'). In each of the remaining countries, this is the second most frequently mentioned reason (in France, jointly with 'Concerns about sharing personal data on the platform or the Internet'), with the exception of Denmark. In Ireland (52%) and Cyprus (50%), at least half of those who never used collaborative platforms say the main reason for not using them is that they do not know what such platforms are, as do nearly half of those in the United Kingdom (49%). Denmark (15%) stands out for a particularly low proportion who mention this reason: in all other countries, more than a fifth of non-users give this as a reason for not having ever used collaborative platforms.

In 11 countries, the most frequently mentioned reason for not using services offered via collaborative platforms is the **preference for using services offered via traditional channels**. This is the second most common answer in a further 16 countries (in Croatia, jointly with 'Concerns about sharing personal data'), and the third most common answer in Cyprus. While there is significant variation, in all countries less than half of non-users give this answer, ranging from well over four in ten in Poland (45%) to just over one in ten in Cyprus (11%) and Romania (12%).

In most countries, no more than a quarter of non-users are dissuaded from using collaborative platforms because of **concerns about sharing personal data**. The exceptions are Germany (28%), France (27%), Spain (27%), Austria (26%) and Portugal (26%). At the other end of the scale, less than one in ten of the non-users in Lithuania (6%), Italy (5%), Cyprus (5%), Estonia (3%) and Malta (3%) gives this as a reason for not using collaborative platforms. In France (27%), Sweden (20%) and Croatia (18%) this is the second most frequently mentioned option, and in 16 countries it is the third most frequently mentioned (in Finland, Lithuania, the Netherlands and Spain, jointly with 'Lack of trust in the services offered via collaborative platforms', and, in Romania, jointly with 'Lack of trust' and 'Lack of technical knowledge about how to use collaborative platforms').

In all but one country, less than a quarter of non-users mention **lack of trust in services offered via collaborative platforms** as a reason for not using them. The exception is Spain (27%), where just over a quarter mention this reason. In the majority of the remaining countries, the proportions of non-users giving this answer ranges from one in ten to around a quarter. However, in Estonia (8%), Italy (7%), Lithuania (6%) and Malta (5%) just less than one in ten non-users mention the 'lack of trust in the services offered' as a reason for not using collaborative platforms. This is the second most frequently mentioned reason in Denmark (18%) and Cyprus (13%), and is the third most frequently mentioned reason in 12 other countries.

With the exception of Portugal (22%), in all other countries less than a fifth of the non-users of collaborative platforms say that a reason that prevents them from using these platforms is the **lack of technical knowledge**. Nevertheless, this is the second most frequently mentioned reason in Malta (18%) and Estonia (11%). On the contrary, Lithuania (4%) stands out for a particularly low proportion who mention this reason.

In Malta (15%), **poor internet access** is the third most frequently mentioned reason for not using collaborative platforms, but elsewhere this reason is less frequently mentioned. In Latvia (11%), France (10%) and Luxembourg (10%), around one in ten give this answer, but in all other countries less than one in ten do so, with the lowest figure found in the Netherlands (2%).

In most countries, the proportion of those who *spontaneously* give a **different reason** for not using collaborative platforms is no more than a fifth, with the exceptions of Denmark (34%), Estonia (28%) and Croatia (24%).

Q1 For which of the following reasons have you never used a service offered via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(%)

		You don't know what collaborative platforms are	Preference for services offered via traditional channels (e.g. with direct personal contact)	Concerns about sharing personal data on the platform or the Internet	Lack of trust in the services offered via collaborative platforms	Lack of technical knowledge about how to use collaborative platforms	Poor Internet access	Other (SPONTANEOUS)

Base: respondents who have never used services offered via collaborative platforms (n= 20,034)

Socio-demographic differences are as follows:

- Women (39%) are slightly more likely than men (33%) to say that they have never used services offered via collaborative platforms because they *do not know what these platforms are*. This is also a reason more likely to be given by the oldest respondents (43% of those aged 55 or more, compared with 29-33% in younger age groups), by those with the lowest levels of education (54%, compared with 27% of those with the highest levels of education) and by manual workers (36%, compared with 28% of employees and 29% of the self-employed).
- Those with higher levels of education are strongly more likely than those with lower levels of education to mention *preference for services offered via traditional channels* (43% vs. 19% of those who have ended education aged less than 20), *concerns about sharing personal data* (25% vs. 11%) and *lack of trust in the services* (21% vs. 10%).
- The self-employed (42%) and employees (43%) are more likely than manual workers (30%) or those who are not in employment (28%) to have a preference for traditional services.

5 Impact of collaborative platforms on the overall use of services

Respondents who had used collaborative platforms were asked about the impact of their use of these services over the last twelve months on their overall use of services²¹.

Six in ten of the users of services offered via collaborative platforms use these services on top of their habitual usage of services offered via traditional channels or as newcomers to the market

A third (33%) of the users of services offered via collaborative platforms say *they use services offered via traditional channels to approximately the same extent, but they now also use these same services via collaborative platforms*. Just over a quarter (27%) *have only started to use these services when they became available via collaborative platforms*. Thus, 60% of those using services offered via collaborative platforms do so in addition to their existing use of services and without substituting a service provided via a traditional channel.

On the other hand, one fifth of those using services offered via collaborative platforms (20%) *have to some extent replaced the services they used via traditional channels*, while just over one in ten (12%) *have completely replaced some types of services*.

A further 6% of users spontaneously say that none of these statements reflect their experience and 2% say they don't know.

Q3 Thinking about your overall experience with services offered via collaborative platforms in the last 12 months, which of the following statements best describes your experience?
(% - EU)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

²¹ Q3. Thinking about your overall experience with services offered via collaborative platforms in the last 12 months, which of the following statements best describes your experience? ONE ANSWER ONLY You have to some extent replaced the services you used via traditional channels with services offered via collaborative platforms; You have completely replaced some types of services you used via traditional channels with services offered via collaborative platforms; You use services offered via traditional channels to approximately the same extent, but you now also use these same services via collaborative platforms; You only started using the services when they became available via collaborative platforms; None; Don't know.

In summary, 60% of the users of services offered via collaborative platforms²² use them on top of their habitual usage of services offered via traditional channels or as newcomers to the market, while around one third (32%) have replaced services used via traditional channels with those offered via collaborative platforms to at least some extent²³.

Q3 Thinking about your overall experience with services offered via collaborative platforms in the last 12 months, which of the following statements best describes your experience? (% - EU)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

In 15 of the 28 Member States, the largest percentage of users report **using traditional services to approximately the same extent as before but that they now also access these same services via collaborative platforms**²⁴. In Spain, over half (53%) of those who have used collaborative platforms give this answer. In all other countries, this proportion ranges from just over four in ten in Sweden (41%) to less than a quarter of respondents in Czech Republic, Denmark, Romania (all 24%) and Portugal (23%).

In 7 countries, users most frequently report that **they only began to use the services in question when they became available via collaborative platforms**. In Luxembourg (39%), France (37%) and Belgium (34%), over a third of the users of collaborative platforms give this answer, compared with only just over one in ten in Estonia (13%) and Spain (11%), where it is the least common response.

²² Sum of the proportions who use services offered via traditional channels to approximately the same extent, but now also use these same services via collaborative platforms and who only started to use these services when they became available via collaborative platforms.

²³ Sum of the proportions who have to some extent replaced the services they used via traditional channels with ones offered via collaborative platforms and who have completely replaced some types of services they used via traditional channels with services offered via collaborative platforms.

²⁴ Here and throughout the country analysis of the results for this question (Q3), results for Cyprus (n=93) and Luxembourg (n=110) should be treated with caution due to low sample sizes.

There is a similar distribution of responses in the case of those who **have to some extent replaced the services they used via traditional channels with ones offered via collaborative platforms**. In 7 countries, this is the most frequent response, and, more in particular, over a third of respondents in Cyprus (39%), Hungary (37%), Estonia and Finland (both 36%) give this answer. In all other countries no more than a third give this response, with the lowest proportion found in Lithuania (11%), where this is the least common answer.

In all countries, no more than a fifth of respondents say that they have **completely replaced some types of services they used via traditional channels with those from collaborative platforms**. In all but three countries, this is the least frequently mentioned response. In Portugal (20%) and Malta (19%), around a fifth say that they have completely replaced some services, but in Luxembourg (3%) and Bulgaria (4%) very few give this response.

In the majority of countries, few users of collaborative platform say that **none of these statements** apply to their experience. The exceptions are Belgium, Denmark (both 14%), Germany (12%) and Cyprus (10%).

Q3 Thinking about your overall experience with services offered via collaborative platforms in the last 12 months, which of the following statements best describes your experience?

(%)

		You have to some extent replaced the services you used via traditional channels with services offered via collaborative platforms	You have completely replaced some types of services you used via traditional channels with services offered via collaborative platforms	You use services offered via traditional channels to approximately the same extent, but you now also use these same services via collaborative platforms	You only started using the services when they became available via collaborative platforms	None (SPONTANEOUS)

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

Q3 Thinking about your overall experience with services offered via collaborative platforms in the last 12 months, which of the following statements best describes your experience?

Base: respondents who have used services offered via collaborative platforms (n= 6,389)

There are some **socio-demographic differences** on this question, as follows:

- Men (14%) are more likely than women (9%) to *have completely replaced some types of services they used via traditional channels with services offered via collaborative platforms*.
- Users of collaborative platforms aged 55 years or more are the least likely to *use services via traditional channels to approximately the same extent while at the same time using those offered via collaborative platforms* (24%, compared with 33-36%). Conversely, the younger users of collaborative platforms aged 15-24 are the most likely to *have started using the services when they became available via collaborative platforms* (32%, compared with 25%-26% of other age groups).
- Those with higher levels of education are the more likely to *have to same extent replaced the services they used via traditional channels with services offered via collaborative platforms* (23%, vs 15%), while those with lower levels of education are the more likely to *only have started using such services when they became available via collaborative platforms* (31%, vs 25%-26%).
- The self-employed are more likely than manual workers to *have continued to use services offered via traditional channels* (36%, compared with 30%), but manual workers are the more likely to *have started using these services only when they became available via collaborative platforms* (33%, compared with 27%).
- There are also some significant differences on this question when responses are broken down by sector:
 - Those using collaborative finance services are the most likely to *have completely replaced some types of services used via traditional channels with those provided via collaborative platforms* (18% vs. 11%-14% of those using other types of services), although they are the least likely to *have replaced them to some extent* (15% vs. 21%-22%). Overall, there are only small differences between sectors among those who *have replaced traditional channels with collaborative platforms to at least some extent*.

- Those using household (30%) and transport (32%) services are the least likely *to have continued to use services offered via traditional channels* (compared with 36%-38% of those using other types of services). However, together with those using collaborative finance services, they are also the most likely *to have started using these services only when they became available via collaborative platforms* (27%-28% vs. 21%-23%). Overall, those using collaborative finance services are slightly more likely than those using services in other sectors to *have used services offered via collaborative platforms on top of those offered via traditional channels* (64% vs. 58%-61%).

Q3 Thinking about your overall experience with services offered via collaborative platforms in the last 12 months, which of the following statements best describes your experience?

(% of users of services offered via collaborative platforms - EU)

	You have to some extent replaced the services you used via traditional channels with services offered via collaborative platforms	You have completely replaced some types of services you used via traditional channels with services offered via collaborative platforms	You use services offered via traditional channels to approximately the same extent, but you now also use these same services via collaborative platforms	You only started using the services when they became available via collaborative platforms

II. PROVISION OF SERVICES VIA COLLABORATIVE PLATFORMS

This chapter focuses on respondents' use of collaborative platforms to provide services. The first section looks at the proportions of respondents who have offered services via collaborative platforms and the breakdown of these services by sector. The second section focuses on providers' experiences of using collaborative platforms, asking what reasons they have for offering services through this medium, and what problems they have encountered in doing so. The third section turns to the attitudes of non-providers, asking about why they do not offer services via collaborative platforms, the likelihood they will offer such services, and the extent to which they use traditional channels to offer services.

1 Offering services via collaborative platforms

Respondents were asked whether they had ever offered a service via a collaborative platform²⁵. Those who said they had offered such services were then asked in which sectors they had offered these services²⁶.

a. Frequency of offering services via collaborative platforms

Only 6% of Europeans have ever offered services via collaborative platforms

Only 6% of Europeans have ever offered services via collaborative platforms, with 3% offering them *once or a few times*, 2% offering them *occasionally* (i.e. once every few months), and only 1% offering them on a *regular basis* (i.e. once a month or more often). Over nine in ten (94%) have *never offered services via collaborative platforms*.

²⁵ D9. Have you ever offered a service via a collaborative platform? No, never; Yes, once or a few times; Yes, occasionally; Yes, regularly; Don't know.

²⁶ Q10. In which of the following sectors have you provided a service via a collaborative platform? MULTIPLE ANSWERS POSSIBLE Transport (e.g. car sharing); Accommodation (e.g. renting an apartment); Food-related services (e.g. home delivery, food sharing); Household services (e.g. gardening, repairs, child care); Professional services (e.g. IT services, accounting); Collaborative finance (e.g. peer-to-peer lending or crowd-funding); Other; None; Don't know.

D9 Have you ever offered a service via a collaborative platform?
(% - EU)

Base: all respondents (n= 26,544)

In all but two countries, less than one in ten have offered a service via a collaborative platform. The exceptions are Latvia (17%) and France (11%). On the other end of the spectrum, in Cyprus, only 2% of respondents have offered services in this way.

D9 Have you ever offered a service via a collaborative platform?
(%)

Base: all respondents (n= 26,544)

D9 Have you ever offered a service via a collaborative platform?
(% - TOTAL 'YES')

Base: all respondents (n= 26,544)

Younger, more educated and self-employed respondents are more likely to offer services via collaborative platforms.

- Older respondents are less likely to have offered services via these platforms: only 3% of those aged 55 years or more say they have offered such services, compared with 8% of those aged 15-24 and 11% of those aged between 25-39.
- Nearly one in ten of those with the highest levels of education (9%) has offered services via collaborative platforms, compared with only 1% of those with the lowest levels of education.
- Just over one in ten of the self-employed (11%) have offered services via a collaborative platform, compared with only 4% of manual workers and of those not currently employed.

D9 Have you ever offered a service via a collaborative platform?
(% - EU)

	No, never	Yes, once or a few times	Yes, occasionally (i.e. once every few months)	Yes, regularly (i.e. once a month or more often)	Total 'Yes'

b. Offering services via collaborative platforms by sector

The services most commonly offered via collaborative platforms are in the transport and accommodation sectors

The *transport sector* (44%) is the sector most frequently mentioned by those who have offered services via collaborative platforms, followed by the *accommodation sector* (35%). Less than a fifth have provided such a service in the household services (17%), professional services (14%) or food-related services (10%) sectors, and in the case of collaborative finance, less than one in ten (8%) have, with similar proportions spontaneously saying they have provided other kinds of services (9%) or have not provided any of the named services (7%). 1% say they don't know.

Q10 In which of the following sectors have you provided a service via a collaborative platform?
(MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have offered services via collaborative platforms (n= 1,598)

A **country-level analysis** of this question is not possible due to low size of the bases of respondents.

There are several significant **socio-demographic differences** among those who provide services via a collaborative platform, varying by sector. In some cases, these results should be treated with caution due to small sample sizes²⁷.

- Half (50%) of the service providers aged 15-24 have used collaborative platforms to provide services in the transport sector, compared with just over a third (35%) of the service providers aged 55 years or more. However, they are less likely than those in other age groups to have used these platforms to provide services in the accommodation sector (23%, compared with 33-41%).
- Those with the lowest levels of education are more likely to have provided services in the food-related services sector (20%, compared with 9% of those with the highest levels of education), in the household services sector (32%, compared with 13%) and in the collaborative finance sector (18%, compared with 7%). Conversely, those with higher levels of education are significantly more likely to have provided services in the education services sector (49% compared with 21%). Respondents living in large towns are more likely to have provided services in the accommodation sector (42%, compared with 33% of those in rural villages).
- Manual workers are more likely than the self-employed to have provided services in the transport (45% compared with 33%), food-related (22% compared with 10%) and professional services (25% compared with 18%) sectors, while more of the self-employed have provided services in the accommodation sector (46% compared with 32%).

²⁷ The categories with low sample sizes are respondents who finished their education aged 15 or less (n= 39) and manual workers (n= 70).

Q10 In which of the following sectors have you provided a service via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)

(% of providers of services via collaborative platforms - EU)

	Transport (e.g. car sharing)	Accommodation (e.g. renting an apartment)	Household services (e.g. gardening, repairs, child care)	Professional services (e.g. IT services, accounting)	Food-related services (e.g. home delivery, food sharing)	Collaborative finance (e.g. peer-to-peer lending or crowd-funding)

2 Advantages and disadvantages of using collaborative platforms as a provider

Those respondents who said they had provided services via collaborative platforms were then asked for what reason they had used these platforms²⁸, and which problems they had encountered when using them²⁹.

a. Main reasons for offering services via collaborative platforms

Providers have a variety of reasons for offering services via collaborative platforms

When asked to identify their reasons for offering services via collaborative platforms, respondents give a variety of answers, with none standing out in particular. Just over half say that these platforms offer *an easy way to interact with consumers* (53%) and a *more sustainable and efficient use of available assets* (51%), while half say that they *give access to more consumers* (50%) and *represent an additional source of income* (50%).

Slightly fewer mention that collaborative platforms *make it easy to become a services provider* (43%) or that *using them means you can have flexible working hours* (40%). Just over a third of respondents see collaborative platforms as a *way to offer additional or more innovative services* (36%), but just one in ten (10%) say that *offering services in this way constitutes their main source of income*. Very few (2%) spontaneously mention *other reasons* for offering services via collaborative platforms, while 6% do not identify any specific reasons for using these platforms to offer services and 1% say they don't know.

²⁸ Q11. For which of the following reasons do you offer services via collaborative platforms? MULTIPLE ANSWERS POSSIBLE Main source of income; An additional source of income; Flexible working hours; An easy opportunity to become a services provider; An opportunity to offer additional or more innovative services; Access to more consumers; An easy way to interact with consumers; More sustainable and efficient use of available assets; Other; None; Don't know.

²⁹ Q12. What are the main problems you encountered when providing services via a collaborative platform, if any? MULTIPLE ANSWERS POSSIBLE Lack of clarity about how to provide the service legally; Complicated or difficult to provide the service legally; Complicated system for paying tax; Unclear impact on your employment status; Difficulties with consumers using your services; Other; None; Don't know.

Q11 For which of the following reasons do you offer services via collaborative platforms? (MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have offered services via collaborative platforms (n= 1,598)

A **country-level analysis** of this question is not possible due to low size of the bases of respondents.

Across the EU, respondents who have offered services via collaborative platforms mention *an average of more than three reasons (3.3)* for offering services via these platforms.

There are some **socio-demographic differences** on this question, but they vary in magnitude. In some cases, these results should be treated with caution due to small sample sizes³⁰.

- In most cases, there are no significant differences between women and men, but women are more likely than men to mention *flexible working hours* (44%, compared with 37%) and *access to more consumers* (54%, compared with 48%), while men are slightly more likely to mention *more sustainable and efficient use of assets* (52%, compared with 48%).
- Those aged 15-24 are more likely than those aged 55 or more to mention *each* of these reasons. For instance, they are more likely to say they offer services via collaborative platforms because this represents for them *an additional source of income* (66%, compared with 35%).

³⁰ The categories with low sample sizes are respondents who finished their education aged 15 or less (n= 39), manual workers (n= 70) and those who provided services via collaborative platforms in the collaborative finance sector (n=123).

- There are differences between educational groups in each case. Those with the lowest levels of education are more likely to use these platforms as their *main source of income* (21%, compared with 7%), while those with the highest levels of income are more likely to use them as *an additional source of income* (49%, compared with 39%). The remaining reasons are mentioned more frequently by those with the lowest levels of education, with the exception of *more sustainable and efficient use of assets*, which is mentioned by nearly half (49%) of those with the highest levels of education, but by just over four in ten (41%) of those with the lowest levels.
- Manual workers are more likely than the self-employed to mention *each* of the stated reasons for offering services via collaborative platforms. In particular, they are more likely to provide services via collaborative platforms as their *main* (30% compared with 17%) and *additional* (63% compared with 43%) *sources of income*.
- Those who provided services in the collaborative finance sector are the most likely to mention as reasons for doing so the fact that these platforms offer *an easy way to interact with consumers* (77% compared with 59%-62%) and a *more sustainable and efficient use of available assets* (71% compared with 49%-66%). Those offering household services via collaborative platforms are the most likely to mention *an easy opportunity to become service providers* (62% compared with 44%-58%), an *additional source of income* (63% compared with 49%-61%) and, together with providers of professional services, *flexible working hours* (59% compared with 38%-49%) as reasons for offering services via these platforms. Finally, providers in the transport sector are the least or among the least likely to mention *each* of the reasons listed in the survey, except for *more sustainable and efficient use of available assets*.

Q11 For which of the following reasons do you offer services via collaborative platforms?
(MULTIPLE ANSWERS POSSIBLE)

(% of providers of services via collaborative platforms - EU)

	An easy way to interact with consumers	More sustainable and efficient use of available assets	An additional source of income	Access to more consumers	An easy opportunity to become a services provider	Flexible working hours	An opportunity to offer additional or more innovative services	Main source of income

Collaborative finance	77	71	61	68	52	49	42	24

b. Main problems encountered when providing services via collaborative platforms

Nearly half of the respondents that are providers of services via collaborative platforms have encountered no problems when using these platforms

When asked to identify the main problems they had encountered when providing services via a collaborative platform, nearly half spontaneously say that they had not encountered *any problems* (46%). The problem most frequently mentioned is the *lack of clarity about how to provide the service legally* (22%), followed by *difficulties with customers using the services* and *complicated systems for paying tax* (both 19%). Fewer say that *it is complicated or difficult to provide the service legally* (13%) or that doing so has an *unclear impact on their employment status* (9%).

4% of the providers spontaneously mention other problems (4%), while 2% say they don't know.

Q12 What are the main problems you encountered when providing services via a collaborative platform, if any?
(MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have offered services via collaborative platforms (n= 1,598)

A **country-level analysis** of this question is not possible due to low size of the bases of respondents.

There are fewer significant and consistent **socio-demographic differences** in this case. For some categories and these results should be treated with caution due to small sample sizes³¹.

- Men are slightly more likely than women to mention *lack of clarity about how to provide the service legally* (24%, compared with 20%) and that *it is complicated or difficult to provide it legally* (16%, compared with 9%), while women are more likely to say that *they have not experienced any problems* (50%, compared with 43%).
- Those aged 15-24 are slightly more likely to say that there is *insufficient clarity about how to provide services legally* via collaborative platforms (26%, compared with 21-22% in other age groups).
- Few significant differences can also be observed when the answers are broken down by respondents' occupation. For instance, employees are among the least likely to mention *each* of these problems and, together with manual workers, they are the most likely to say they *have not encountered any problems* when providing services via collaborative platforms (51% of employees and 50% of manual workers, compared with 40% of self-employed and 42% of those who are not in employment).
- Providers in the transport and collaborative finance sectors are the most likely to say that *they have not encountered any problems* when providing these services via collaborative platforms (48%-46% compared with 25%-40% in other sectors). Providers of services via collaborative platforms in the food sector are the most likely to mention as a problem the difficulties with consumers using their services (33% compared with 14%-28%), while providers of professional services are the most likely to report problems with complicated systems for paying tax (31% compared with 19%-27%).

³¹ The categories with low sample sizes are respondents who finished their education aged 15 or less (n= 39), manual workers (n= 70) and those who provided services via collaborative platforms in the collaborative finance sector (n=123).

Q12 What are the main problems you encountered when providing services via a collaborative platform, if any? (MULTIPLE ANSWERS POSSIBLE)

(% of providers of services via collaborative platforms - EU)

	Lack of clarity about how to provide the service legally	Complicated system for paying tax	Difficulties with consumers using your services	Complicated or difficult to provide the service legally	Unclear impact on your employment status	Other (DO NOT READ OUT)	None (DO NOT READ OUT)	Don't know

3 Non-providers' attitudes towards collaborative platforms

This final section examines the attitudes of non-providers towards collaborative platforms. First, citizens who have never offered services via collaborative platforms, were asked whether they would consider offering services occasionally via collaborative platforms³². Then, the same citizens were asked for what reason they do not offer such services³³ and whether they had occasionally offered services via traditional channels³⁴.

a. Reasons for not offering services via collaborative platforms

A majority of those who do not offer services via collaborative platforms do not have the time nor the interest to do so

When asked why they have never offered a service via a collaborative platform, nearly two thirds (64%) say that *they do not have sufficient time or interest* to do this. Just under a third (31%) say *they lack the technical knowledge about how to use collaborative platforms*, while around a quarter mention *lack of trust in online booking process or payments* (25%) and *lack of trust in consumers using their services* (24%). Just over a fifth (22%) do not offer these services because *it is unclear or complicated to provide the service legally*, while under a fifth mention *that systems for paying tax are complicated* (16%) or that *the impact it would have on their employment status is unclear* (13%). One in ten (10%) mention *poor Internet access* or spontaneously mention *other reasons*. 5% say they don't know.

³² Q7. Would you consider offering services occasionally as a private individual via collaborative platforms? ONE ANSWER POSSIBLE Yes; No; Don't know.

³³ Q8. For which of the following reasons have you never offered a service via a collaborative platform? MULTIPLE ANSWERS POSSIBLE No time or interest; Poor Internet access; Lack of technical knowledge about how to use collaborative platforms; Lack of trust in the online booking process or payments; Lack of trust in consumers using your services; Unclear or complicated to provide the service legally; Complicated system for paying tax; Unclear impact on your employment status; Other; Don't know.

³⁴ Q9. Have you ever offered services occasionally as a private individual via traditional channels? ONE ANSWER ONLY No, never; Yes, once or a few times; Yes, occasionally; Yes, regularly; Don't know.

Q8 For which of the following reasons have you never offered a service via a collaborative platform?
(MULTIPLE ANSWERS POSSIBLE)
(% - EU)

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

In all countries, the most frequently mentioned reason by non-providers for not offering services via collaborative platforms is **lack of time or interest**. However, there are significant differences in the proportions of non-providers who say so. In six countries, at least three quarters say they lack time or interest, with France (83%) standing out with a high proportion of non-providers giving this answer. In six other countries, only a minority say they do not have time nor interest, particularly in Cyprus where less than three in ten do so (29%).

In all but four countries, **lack of technical knowledge** about how to use collaborative platforms is the second most frequently mentioned reason for not offering services via collaborative platforms, and, in three countries, it is the third most frequently mentioned reason. While in each country less than half give this answer, there is significant variation. In Portugal (44%) and Spain (42%) over four in ten of non-providers say they lack technical knowledge about how to use collaborative platforms, while less than a fifth do so in Estonia, Hungary, Lithuania (all 17%) and Denmark (16%).

In three countries, **lack of trust in the online booking or payment process** is the second most frequently mentioned reason for not offering services via collaborative platforms, and in 12 countries this is the third most frequently mentioned reason. Only a minority of respondents in all countries give this answer, but there is much variation. In Austria, Spain (both 35%), France and Portugal (both 34%), over a third of the non-providers identify this as a reason why they do not offer services via collaborative platforms, while just less than one in ten of the non-providers do the same in Denmark (9%), Italy, Lithuania (both 8%), Estonia (4%) and Malta (3%).

The country-level distribution is very similar in what concerns **lack of trust in consumers who use the services** offered via collaborative platforms. In France and Denmark, this is the second most frequently mentioned reason for not offering services via collaborative platforms, and in 12 countries it is the third most frequently mentioned reason. Over a third of non-providers give this answer in Austria (35%), Spain (35%) and France (34%). Again, the lowest proportions of non-providers who give this answer are in Italy (8%), Lithuania (7%), Estonia (5%) and Malta (2%).

In six countries, the third most frequent reason mentioned by non-providers for not offering services via collaborative platforms is that **it is unclear or complicated to provide such services legally**. There is a wide spread of responses: again, Spain (36%) and Portugal (33%) have the largest proportions of non-providers who give this answer, followed by Austria (30%). At the other end of the scale, the lowest proportions are again found in Estonia, Lithuania (both 5%), Italy (4%) and Malta (3%).

In all countries, around one quarter of non-providers mention **complicated tax systems** as a reason for not providing services via collaborative platforms. Portugal (25%), Austria (23%) and Spain (23%) have again the largest proportions of non-providers mentioning this reason, along with Slovenia (23%), while the smallest proportions are found in Cyprus, Italy and Malta (all 2%).

In Portugal (26%) Spain (23%) and Austria (21%), more than a fifth of non-providers say that they do not offer services via collaborative platforms because of **the unclear impact of doing so on their employment status**. Very few respondents in Italy (4%), Estonia (3%) and Malta (1%) have this concern.

In all countries, less than a fifth say that **poor Internet access** prevents them from providing services via collaborative platforms. The highest proportions are in Ireland (16%), Belgium and Spain (both 15%), while the lowest are in Denmark, Estonia and the Netherlands (all 3%).

In most countries, no more than a fifth of non-providers mention **other reasons**. It is notable that Estonia (22%) and Malta (21%), which are two of the countries that consistently have the lowest proportions of non-providers who mention *specific* reasons, have the highest proportions of those who mention other reasons for not doing so, along with Croatia (21%).

Q8 For which of the following reasons have you never offered a service via a collaborative platform? (MULTIPLE ANSWERS POSSIBLE)
(%)

		No time or interest	Lack of technical knowledge about how to use collaborative platforms	Lack of trust in the online booking process or payments	Lack of trust in consumers using your services	Unclear or complicated to provide the service legally	Complicated system for paying tax	Unclear impact on your employment status	Poor Internet access	Other (SPONTANEOUS)

2nd MOST FREQUENTLY MENTIONED ITEM										
3rd MOST FREQUENTLY MENTIONED ITEM										

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

There are few substantial **socio-demographic differences** on this question.

- The non-providers aged 55 years or more are the least likely to say they do not offer services via collaborative platforms because *they have no time or interest* (60% compared with 65%-68%). By contrast, the oldest cohort is the most likely to mention *lack of technical knowledge* (36% compared with 24-30%) and *poor Internet access* (14% compared with 7-9%).
- Those with the highest levels of education are more likely than those with lower levels of education to say *they have no time or interest* in providing services via collaborative platforms (66% compared with 57%-63%). On the other hand, those with the lowest levels of education are more likely to say *they have poor internet access* (17% compared with 8%) or *lack of technical knowledge* (41% compared with 27%-33%).

Q8 For which of the following reasons have you never offered a service via a collaborative platform?
(MULTIPLE ANSWERS POSSIBLE)

(% of respondents who have never offered services via collaborative platforms - EU)

	No time or interest	Lack of technical knowledge about how to use collaborative platforms	Lack of trust in the online booking process or payments	Lack of trust in consumers using your services	Unclear or complicated to provide the service legally	Complicated system for paying tax	Unclear impact on your employment status	Poor Internet access

b. Possibility of offering services via collaborative platforms

Nearly a fifth of respondents who have never offered services via collaborative platforms would consider doing so occasionally

Respondents who said they have not previously offered services via collaborative platforms were asked if they would consider doing so on an occasional basis. Just under a fifth (19%) say that they would consider doing this, compared with nearly eight in ten (78%) who say that they would not. 3% say they don't know.

Q7 Would you consider offering services occasionally as a private individual via collaborative platforms?
(% - EU)

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

In all countries, the majority of respondents that have never offered services via collaborative platforms would not consider doing so occasionally in the future, with the proportion varying from just under two thirds in Cyprus, Greece (both 65%) and Portugal (64%), to over eight in ten respondents in the Netherlands (86%), Belgium and Germany (both 84%).

Q7 Would you consider offering services occasionally as a private individual via collaborative platforms?
(%)

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

For the **socio-demographic breakdown**, the focus is on the proportions of respondents who would consider offering services occasionally via collaborative platforms.

- Men (22%) are more likely than women (16%) to say that they would consider offering such services.
- There is a significant difference between age groups: over a third of respondents aged between 15 and 24 (34%) say that they would offer such services, compared with less than one in ten of those aged 55 or more (9%).
- Over a fifth of those with the highest levels of education (22%) answer this question positively, compared with less than one in ten of those with the lowest levels of education (9%).
- Nearly three in ten of the self-employed (29%) would consider offering services via collaborative platforms, compared with less than a fifth of manual workers (17%) or those not currently in employment (15%).

Q7 Would you consider offering services occasionally as a private individual via collaborative platforms?

c. Frequency of use of traditional channels to offer services

More than one in ten of those who have never offered services via collaborative platforms (14%), occasionally offer services, as a private individual, via traditional channels

Over eight in ten (85%) of those who have not provided services via collaborative platforms have also *not offered services via traditional channels*. However, 14% respondents do so, either *once or a few times* (6%), or *occasionally* (i.e. once every few months) (6%), or *regularly* (i.e. once a month or more often) (2%). 1% say they don't know.

Q9 Have you ever offered services occasionally as a private individual via traditional channels?
(% - EU)

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

In all but one of the 28 Member States, less than a quarter of those who have never offered services via collaborative platforms say also that they **have never offered services via traditional channels** either. The exception is Latvia (27%). At the other end of the scale, one in ten say the same in Greece, Hungary and Spain (all 10%) and less than one in ten say this in Cyprus (8%).

In most countries, less than one in ten of the respondents that have never offered services via collaborative platforms, have **offered services via traditional channels once or a few times**. However, one in ten in Finland, Lithuania, the Netherlands and Sweden (all 10%) have done so, as did 15% in Latvia. In Ireland, Italy (both 4%), Cyprus and Greece (both 3%), very few have offered services via traditional channels once or a few times.

Poland (14%) and Romania (10%) are the only countries in which at least one in ten of those that have never offered services via collaborative platforms have however **offered services via traditional channels on an occasional basis**, while very few in any country have offered such services **on a regular basis**, the highest proportion occurring in the Czech Republic (5%).

Q9 Have you ever offered services occasionally as a private individual via traditional channels?
(%)

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

Q9 Have you ever offered services occasionally as a private individual via traditional channels?
(% - TOTAL 'YES')

Base: respondents who have never offered services via collaborative platforms (n= 24,857)

For the **socio-demographic breakdown**, the focus is on the total proportions of those who say they have offered services via traditional channels. Among these:

- Men (17%) are more likely than women (12%) to have offered services via traditional channels.
- Nearly a fifth of those with the highest levels of education (18%) have offered services via traditional channels, compared with only 5% of those with the lowest levels of education.
- The self-employed (27%) are significantly more likely to have offered such services: over a quarter give this answer, compared with only 14% of employees and 15% of manual workers.

Q9 Have you ever offered services occasionally as a private individual via traditional channels?

(% of providers of services via collaborative platforms - EU)

	No, never	Yes, once or a few times	Yes, occasionally (i.e. once every few months)	Yes, regularly (i.e. once a month or more often)	Don't know	Total 'Yes'
EU28	85	6	6	2	1	14

III. USER-PROVIDER PROFILING OF RESPONDENTS

The final chapter focuses on the profiles of respondents with respect to whether they are users of services provided via collaborative platforms, providers, both users and providers, or neither.

Three quarters of Europeans are neither users nor providers of services via collaborative platforms, while almost one fifth are only users

By far the most common profile of respondents is that they are *neither users nor providers* of services via collaborative platforms, with three quarters (75%) of those polled falling into this category. Nearly a fifth (19%) are only *users of these services*, while only 1% of respondents are *solely providers*, leaving 5% who are *users and providers*.

D8D9 User-provider profile
(% - EU)

Base: all respondents (n= 26,544)

In all countries, the largest percentage of respondents are **neither users nor providers of services via collaborative platforms**. In most cases, this proportion ranges from two thirds to eight in ten of the respondents. Latvia (58%) stands out for a particularly low proportion of respondents who are neither users nor providers, while the highest proportions are in Lithuania and Portugal (both 82%).

The proportion of respondents who are **only users of services offered via collaborative platforms** ranges from just over one in ten of respondents in Belgium, Italy (both 14%) and Bulgaria (13%), to over three in ten in Malta (31%). More than a quarter of respondents in Estonia, Ireland (both 28%), Hungary and the United Kingdom (both 27%) are only users.

In all but two countries, less than one in ten are **both users and providers of services offered via collaborative platforms**. The exceptions are Latvia (15%) and France (10%). In Cyprus, Lithuania and Portugal (all 2%) very few respondents give this answer.

Finally, very few respondents (2% or less) in any of the countries surveyed are **only providers** of these services, and in each country this is the lowest percentage recorded.

Base: all respondents (n= 26,544)

There are clear **socio-demographic differences** for the two largest categories, those who are *only users*, and those who are *neither users nor providers*.

- Around three in ten of those aged 15-39 (29%-31%) are users of services offered via collaborative platforms, compared with less than one in ten (9%) among those aged 55 or more. On the other hand, while just over six in ten of those aged 15-39 (61%) are neither users nor providers, this increases to nearly nine in ten of those in the oldest age group (88%).
- A quarter of respondents with the highest levels of education (25%) are users of these services and more than two thirds (67%) are neither users nor providers, compared with 5% and 94% respectively of those with the lowest levels of education.
- Just over a quarter of respondents in large towns (27%) are users of services provided via collaborative platforms, compared with only 14% of those in rural villages. By contrast, over eight in ten of respondents in rural villages (81%) are neither users nor providers, against less than two thirds of respondents in large towns (65%).
- The self-employed (27%) and employees (26%) are much more likely than manual workers (11%) or those not working (13%) to be users of these services, while the self-employed (10%) are more likely to be users and providers, compared with 3% of manual workers and those not working. On the other hand, while only just over six in ten (62%) of the self-employed are neither users nor providers, over eight in ten manual workers (85%) and those not working (83%) are in this category.

TECHNICAL SPECIFICATIONS

Between the 23 and 30 April 2018, TNS Political & Social, a consortium created between TNS political & social, TNS UK and Kantar Belgium, carried out the FLASH EUROBAROMETER 467 survey on request of the EUROPEAN COMMISSION, Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs. It is a general public survey co-ordinated by the Directorate-General for Communication, "Media monitoring, media analysis and Eurobarometer" Unit.

The FLASH EUROBAROMETER 467 survey covers the population of the respective nationalities of the European Union Member States, resident in each of the 28 Member States and aged 15 years and over.

All interviews were carried using the TNS e-Call centre (our centralised CATI system). In every country the respondents were called both on fixed lines and mobile phones. The basic sample design applied in all states is multi-stage random (probability). In each household, the respondent was drawn at random following the "last birthday rule".

TNS has developed its own RDD sample generation capabilities based on using contact telephone numbers from responders to random probability or random location face-to-face surveys, such as Eurobarometer, as seed numbers. The approach works because the seed number identifies a working block of telephone numbers and reduces the volume of numbers generated that will be ineffective. The seed numbers are stratified by NUTS2 region and urbanisation to approximate a geographically representative sample. From each seed number the required sample of numbers are generated by randomly replacing the last two digits. The sample is then screened against business databases in order to exclude as many of these numbers as possible before going into field. This approach is consistent across all countries.

QUESTIONNAIRE

(READ OUT): Collaborative platforms are specialist internet-based websites or apps that provide an open marketplace where consumers can connect with people offering services. Consumers can use services ranging from renting accommodation or car sharing to household jobs. People offering services can be private individuals providing occasional services or professionals.

ASK ALL**D8 Have you ever used a service offered via a collaborative platform?**

(READ OUT - ONE ANSWER ONLY - IF NEEDED, CLARIFY: "AS A CONSUMER")

- | | |
|--|---|
| No, never | 1 |
| Yes, once or a few times | 2 |
| Yes, occasionally (i.e. once every few months) | 3 |
| Yes, regularly (i.e. once a month or more often) | 4 |
| DK/NA (DO NOT READ OUT) | 5 |

NEW BASED ON FL438 Q1

D9 Have you ever offered a service via a collaborative platform?

(READ OUT - ONE ANSWER ONLY - IF NEEDED CLARIFY: "YOU AS A SERVICE PROVIDER")

- | | |
|--|---|
| No, never | 1 |
| Yes, once or a few times | 2 |
| Yes, occasionally (i.e. once every few months) | 3 |
| Yes, regularly (i.e. once a month or more often) | 4 |
| DK/NA (DO NOT READ OUT) | 5 |
